

Awareness of Chemical Substances

The equipment that your company is receiving from First Solar was used in a process that utilized chemical substances (e.g. such as cadmium and/or corrosives). All accessible liquids have been removed from the equipment. The equipment has been cleaned to the extent practicable to remove as much of the inorganic chemical substances as possible prior to being shipped to you. The equipment may not be completely free of the presence of inorganic chemical substances.

Inorganic chemical substances are known to be hazardous substances and dismantling, cutting, grinding, welding, or otherwise handling the equipment may result in levels of these substances above regulatory occupational exposure limits. You are responsible for utilizing the appropriate personal protective equipment, including respiratory protection and proper ventilation, as required when dismantling, cutting, grinding, welding or otherwise handling the equipment. You are also responsible for the proper disposal and handling of the equipment and any residual materials created by dismantling, cutting, grinding, welding or otherwise handling the equipment in accordance with applicable regulatory requirements.
